

Product Family: Hitachi Drives

Number: AN-HIT-015

Subject: Software connections from DOP pro software to Hitachi drives

Date Issued: 12/16/03

Revision: Original

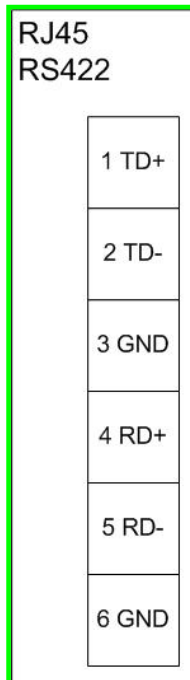

The Purpose of this application note is to illustrate the basic communication connections to the L100, SJ100, and SJ300 drives from Hitachi with DOP professional and DOP Plus software.

The Hitachi protocol is proprietary, however the physical layer is a standard RS 422 format. The user must use a Hitachi authorized software package like DOP professional, but any commercially available RS232 to RS422 converter can work.

We only recommend and support the converter available from Hitachi.

RJ45 port located under front access panel.
