Release Notes for Point of View

Point of View v8.0 + SP1 + Patch 1 (Thursday, January 19, 2017)

Type	Description
Issue	Resolved issue with the SyncTrendStatus not working as expected. Now it returns the value 3, which means that the Synchronization was finished, once, just like the SyncEventStatus and SyncAlarmStatus functions.
Issue	Resolved issue with the Batch option of the Trend Control object causing the system to become unstable in certain situations
Issue	Resolved issue with the Trend Control object, when in Development mode and changing the weight of a pen causes all the pens to disappear if the legend was configured to not be displayed.
Issue	Resolved issue with the Remove Unused Tags and Cross Reference not working as expected having an Array Tag configured as an Array Index or another Array Tag on VBScript
Issue	Resolved issue with the Custom Fields on the Alarm Control Object, when you use tags between curly brackets, for instance {StringTags}, when configuring the messages, and these tags values were Blank.
Issue	Resolved issue with duplicated messages on the Alarm/Event Control object if the history was configured to be saved in Binary Mode
Issue	Resolved issue with the built-in GetLine() function reading only the first 255 characters when the "optOverflowTag" parameter was being included on the function call
Issue	Resolved issue with Screen Objects that can receive focus (text box, text I/O, commands), configured with Visibility dynamic property and Disable Field, that was affecting tabulation when the screen was opened and the Disable field was set for TRUE
Issue	Fixed a condition that would cause the OnUp command to be executed twice when a modal dialog would be called.
Issue	Resolved issue when renaming a Tag using the Datasheet View interface, when prompted to replace the Tag on the entire project, it was not changing it in then Mobile Access Configuration worksheet.
Issue	Resolved issue with the Global Find/Replace not working as expected when certain worksheets were open, such as Tags Datasheet View or Translation editor
Issue	Modified the behavior where grouping basic shapes was automatically creating a symbol object instead of a group of objects which prevented the user from accessing each object's properties.
Issue	Resolved issue with the TagsDBSetAlarm function, when called using the -1 value for the Alarm Type (General Properties) inserting a new blank line on the Alarm Worksheet
Issue	Resolved issue with the Ribbon "Replace" command on a document, that was not replacing Tags when they were referencing a property (Tag Fields)

Issue	Resolved issue with the Text object containing the "Color" animation, after executing the "Test Screen" command, a background color was being added to the object
Issue	Resolved issue with Mobile Access where scrolling down the Process Values Widget screen when the widgets did not fit into the screen.
Issue	Resolved issue with Mobile Access not executing the OnUp commands properly
Issue	Resolved issue with Mobile Access not allowing the user to Check and Uncheck pens on the legacy SMA Trend feature in certain versions of mobile OSs
Issue	Resolved alignment issue with the Caption on Rectangles and buttons, when using multiline and having the "Enabled Enhanced Graphics" option selected.
Issue	Resolved issue with the Shutdown command not being able to fully stop the projects in some situations, usually when Mobile Access task was running.
Issue	Resolved issue with the Background Color on Screens that are called to be opened on a size bigger than the original one.
Issue	Several product translation strings were reviewed.
Issue	Resolved issue with the ActiveX Object Properties window, when trying to configure "Events", it was not saving the Scripts.
Issue	Resolved issue with the Trend Control object, when using Database, not showing all the Data correctly when there were more than 2048 points to be shown, and the Decimation option was enabled.
Change Request	Modified the Tag Properties interface for Shared Integrated Tags which now allows the user to modify the Tag Description
Change Request	Modified the way that Integer Tags process values when it receives an empty string
Requirements	Resolved issue with Renaming a Tag that has been configured a Trend Worksheet, having the "Database" option enabled and configuring something on the "Field" column and. after renaming the Tag on the Tags Database, after replacing the Tag in entire project, the value on the "Field" was being removed
Requirements	Modified the internal structure of screens to show texts with a default font size and name when the configured font information on a Text object is not found
Requirements	Changed the path where the files related to the integration with WW Historian were being installed for it to be the same as the rest of the product.
Requirements	Implemented the Single Screen Scaling functionality on the Mobile Access thin clients.
Requirements	Modified the messages displayed on the Output Windows related to authentication from the Security System
Requirements	Resolved an issue where Changing the Tag Type of an Array that was configured on a Alarm worksheet would have that tag removed from that worksheet
Requirements	Resolved instability issues on the Custom Widget feature related to the Viewer Module.
Requirements	Resolved issue with the Colors Button on the Development Environment when the OS was in Chinese or Japanese, and the user tried to add a Custom Color, and not being able to see all the RGB options.
Requirements	Implemented Swipe options for Multi-Touch on PC and Embedded runtimes
Requirements	Modified the Custom Widget feature to allow it to be resized when the paint area is changed

Requirements	Modified the HST2TXT built-in function to create files with the exported data even if the Start Date that was passed does not have any data, but there is data present on the given interval
Requirements	Created a version of some of the internal encryption library files to be used with the a newer toolset
Requirements	Resolved an issue where an OEM license would not be validated when the MAC address of the first networking device in the operating system's table was invalid.
Requirements	Modified the Trend Control object Legend to update the Pen Color value when the color is set using the "Style Modifier" field
Requirements	Resolved issue with scrolling through large screens with certain objects showing some undesirable lines
Requirements	Modified the PanelMate import Wizard to allow configuring a prefix on the Tag Name to be imported, or to now configure any prefix. Also, after importing a screen, it is now possible to ungroup a group of objects that contains an ActiveX
Requirements	Resolved issue with the Open() function, when called with certain parameters, causing Text objects to be misplaced in the screen.
Requirements	Modified the "Help->About" windows to be opened silently.
Requirements	Modified the built-in Close() function to allow closing the current active screens when no parameters are passed
Requirements	Modified the "Remove Unused Tags" feature, when called form the TreeView in the Global Tab of the Project Explorer, to work the same way as it does when called from Ribbon's Home interface.
Requirements	Improved the integration with WW Online when it is using "Store and Forward"
Requirements	Changed the auto create linked symbol message to a format that is interpretable by the OEM's messaging system.
