

# Release Notes for Point Of View

Point of View v8.0 +SP2 ( Thursday, April 27,2017)

Type	Description
Issue	Resolved issue on Mobile Access with the Hyperlink dynamic property.
Issue	Resolved issue with the Mobile Access and the Bargraph dynamic animation that was not working as expected when the limits were configured with Tags
Issue	Resolved issue when pasting the same linked symbol to an application more than once the user was getting a message to overwrite it even when the user made no changes to the symbol.
Issue	Resolved issue with the Tag Integration for Logix5000 family that would not work properly when some of the String Tags had initialization values with Keywords
Issue	Resolved issue with Shutting down the runtime not being able to fully stop the projects in some situations
Issue	Tag Integration RSLogix 5000 (ABCIP) does importing Tags from L5K files that had Strings tags with Initialization values containing key words.
Issue	Resolved an issue when the user had a Text object with "Text Data Link" property, having the "Input Enabled" option checked, and the "Require Confirmation" enabled, during the runtime when typing a value, and clicking outside the object, the Open/Close commands would stop working.
Issue	Resolved issue with Linked Symbols properties not working as expected with arrays.
Issue	Resolved issue with proprietary Trend HST files format and timeouts between the Viewer module and the runtime that would cause the Trend Control object to malfunction on Windows Embedded Cmpact (Windows CE) runtimes.
Issue	Resolved issue with the Tag Integration feature for RSLogix5000 (ABCIP) not being able to import array elements from UDT containing another UDT which has a member that is an array.
Change Request	Tag Integration for TwinCAT: Improved the performance for loading the tags coming from large PLC programs, on both On-line and Off-line file modes.
Requirement	Modified the Fonts dialog window for graphic objects that contains text and captions
Requirement	Improved the Mobile Access solution to add support for the built-in Grid object
Requirement	Improved the Trend Control in the Mobile Access solution with the addition of the "Auto Scale" capability
Requirement	Improved the overall performance for the Mobile Access solution when switching screens
Requirement	Implemented the capability to change user password when using LDAP
Requirement	Added the Alarm BEEP capability on Web Thin Clients and Secure Viewer, as well as the capability of selecting a custom WAV file.
Requirement	Modify the SMA Trend control to be compatible with multiple time zones.
Requirement	Modified the PanelMate Import Wizard to allow the screens that were created to be modified, including changing the font sizes on the ActiveX objects that are created, and also adjusting the fonts when we perform the Convert Resolution command
Requirement	Disable the Custom Widget Framework log
Requirement	Increased the number of tags that can be configured on the Trend worksheets to 1000
Requirement	Runtime for Windows Embedded Standard (EmbeddedView) now is capable of running on Windows IoT Enterprise and Windows Embedded 8.1 Industry Pro

Requirement	Resolved issue with the Tag Integration feature not working as expected for UDTs, Classes and Structs with more than 50 members
Requirement	Improved the Event Logger feature to start logging the first Logon action when a Web Thin Clients or Secure Viewers get a connection with the Server
Requirement	Resolved issue on the FullIntegration SDK where the system file app.db was being locked by one of the processes and preventing the SDK from opening or deleting projects
Requirement	Resolved an issue with the FullIntegration SDK where the "Save as HTML" command was opening an undesired new window
Requirement	Fixed the Viewer to make sure that it supports Web Thin Client screens being opened into itself using the Web Browser ActiveX.
Requirement	Updated the Built-in legacy SetTranslationFile() function to work properly when called from the main process using legacy TRA format files.
Requirement	Modified the internal limits for the VBScript debug feature
Requirement	Deprecated the Dial and DialUp related built-in functions.
Requirement	Modified the Trend Task to stop generating a record with the value -15000000 that was showing at the exported file created using HST2TXT (both function and executable)
Requirement	Modified the HST2TXT built-in function to create the HDR header files with the correct Tag Names.
Requirement	Improved the stability the Trend Control when used in Batch mode
Requirement	Optimized the Alarm Control screen object for the situation when it is in History mode, the Alarm history is configured to be saved to Databases, with Database Redundancy, and the secondary database is unavailable during the runtime startup.
Requirement	Optimized the GDI use when running the "Save all as HTML" publish command.
Requirement	Improved FactoryTalk import wizard solution to import screens even if some object fails to import and if converted tags conflicts with the other tags that need to be imported.
Requirement	Modified the Communication Ports configuration for certain drivers to allow names that can be used on Linux OS
Requirement	Resolved issue with the updates of the proprietary files created daily using the Trend task
Requirement	Resolved issue with the Trend Control that, when in Database Mode, having Redundant Databases, when Synchronization was needed and daylight saving is enabled, the Sync action did not work as expected.
Requirement	Modified the Password Aging feature of the Security System groups to allow changing the value in days for a number higher than what it was previously configured.
Requirement	Implemented a new way to import a Custom Widget to the project
Requirement	Implemented OPCUA client for IoTView.
Requirement	Resolved issue with the SaveScreenShot() built-in function always printing the Linked Symbols with Visibility Animations, even when they are set to not show.
Requirement	Modified the Trend Worksheet to better handle the Field column when it sorts its content the first time upon its creation.
Requirement	Improved FactoryTalk import wizard solution to import screens even if some object fails to import and if converted tags conflicts with the other tags that need to be imported.
