

Release Notes for Point of View

Point of View 8.0 + Service Pack 2 + Patch 1 (Thursday, July 27, 2017)

Type	Description
Issue	Resolved issue with the Mobile Access (HTML5) feature not showing the Text Object when it contains the Text Data Link property but no Tag or Expression associated to it.
Issue	Resolved issues with the single document "Replace" feature, when using the "Replace by Parts" options not working as expected on VBScript interfaces when there were Tags and variables as Arrays.
Issue	Resolved issue with Copying and Pasting symbols between screens with different sizes
Issue	Resolved issue with the SetViewerPos() built-in function that was causing an error when receiving a call with only the first 2 parameters, and being called during the Startup script or Graphics_OnStart()
Issue	Resolved issue with the Linked Symbol having Custom properties in VBScript no longer working as expected
Issue	Resolved issue with the Linked Symbols not being able to retain properties with negative numeric values.
Issue	Resolved issue with the Open function passing mnemonics parameters, that were not working properly when they were Arrays in certain Screen Active Objects
Issue	Resolved issue with the Remote LogWin not having all the menu options working properly when the remote Runtime System had the Security System enabled
Issue	Resolved issue with the Built-in functions PrintWindow() and SaveScreenShot() that were no longer printing ActiveX embedded in a Screen.
Issue	Resolved issue with the Report tool for RTF format that was not working properly when creating new report worksheets
Issue	Resolved issue with the Tag Integration for RSLogix5000 ABCIP that was not being able to process certain specific large L5K files.
Issue	Resolved an issue with renaming a class members when the Class datasheet view is open and sorted
Issue	Resolved an issue with the connectivity between the Trend Control object / Trend Task and the WW Historian
Issue	Resolved issue with the OPC UA Client on Windows Embedded Compact (WinCE) that would stop sending requests for subscription after certain specific errors.
Issue	Resolved issue with the Trend functionality in Batch mode not working as expected on Windows Embedded runtimes (both Standard and Compact)

Issue	Resolved issue with Resizing up and down Screens, for fonts and text objects, as well as line weight, when using the built-in Open() function, passing screen coordinates and setting it to resize
Issue	Resolved issue with the Security System, when in LDAP mode, not being able to allow the user to change a password if the user primary group was domain users and the group was not listed
Issue	Resolved issue with the Visibility Dynamic Property that was not working well when applied to a Group of objects that included Linked Symbols, when the project was created in certain previous versions of the product
Issue	Resolved vulnerability issue that would allow a user to execute arbitrary commands in certain situations
Change Request	Resolved issue on the Development Environment, that if you had configured a group of objects, and then configured a tag between curly brackets {Tag} on the "Hint" field of the "Object Properties" window, you no longer could close the "Object Properties" window
Change Request	Resolved issues on the Development Environment when using Arrays indexes on VBScript, including Linked Symbols and Single Document Replace features
Change Request	Modified the TCP/IP Client module on Windows CE to better handle the disconnection from the Server in certain specific devices.
Change Request	Mobile Access (HTML5) - Updated the functionalities on the Grid Control object to allow writing to the Data Source (Database)
Change Request	Modified the Tag Integration for PLC5/SLC500 to allow the user to import Input and Output addresses that are in slots different than 0
Change Request	Resolved issue with the Event Logger that was recording 2 messages on the event that a User from the security system was blocked due to reaching the number of invalid attempts.
Change Request	Implemented the capability of using the "Rotate" commands on the Development Environment for Text objects when the Target system is Embedded
Change Request	Resolved issue with the "Verify" command showing a popup error depending on the Security settings of the logged user, and when the project was configured to use the Tag Integration feature
Change Request	Improved the Multi-touch performance in certain devices
Change Request	Resolve issues with the CEF functionality, which allows the user to have Custom Widgets on Screens being displayed on the Viewer module
Change Request	Updated the INI files related to Virtual Keypads for different languages to properly handle the "Space" character
