

Product Advisory

Product Family:	Productivity Series	Number:	PA-P2K-008
Part Numbers:	P2-32ND3, P2-16ND3, and P2-08ND3	Date Issued:	1/25/17
Subject:	Improper operation with input devices that act as a load in their off state	Revision:	Rev. A

Products Affected This Product Advisory affects these three P2-XXND3 modules when they are used with sensors and ZIPport modules having LED indicators.

Description of Problem The P2-XXND3 module will not work with any input device that draws more than 200 micro-amperes in the off state. This is usually caused by devices that have a LED powered by the output circuit of the device. When wired to the input the LED creates a circuit for the input module and draws enough current to turn the input on.

Solution for Problem If the customer is using 24 VDC and the input switching time does not need to be below 2 ms, we can offer the P2-XXNE3 module as a replacement.
