

# Product Advisory

---

<b>Product Family:</b>	Compact Limit Switches	<b>Number:</b>	PA-SENS-004
<b>Products Affected:</b>	All AEM2G Series Compact Limit Switches	<b>Date Issued:</b>	2/06/17
<b>Subject:</b>	Modification to how the switch head attaches to the switch base	<b>Revision:</b>	Original

---

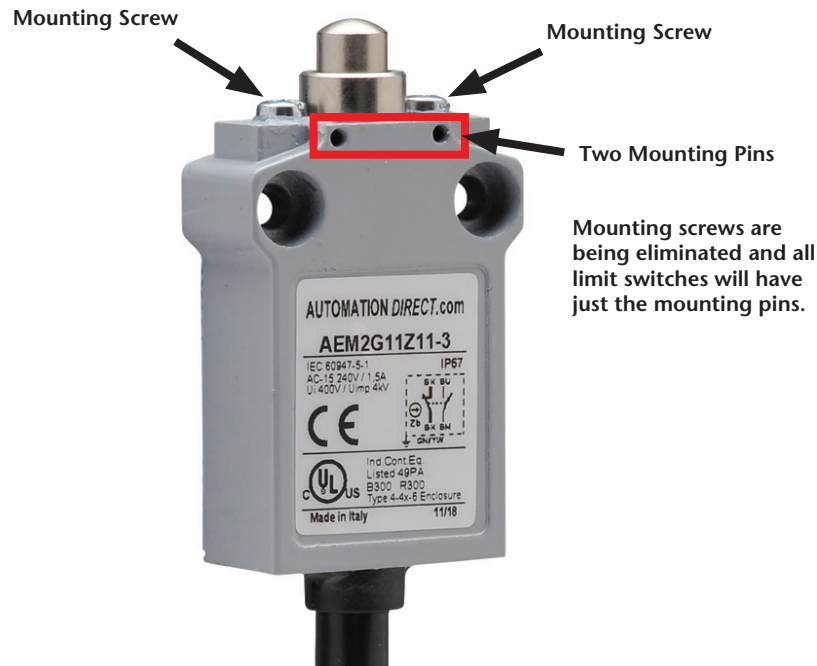

## Description of Modification

Currently there are two methods to secure the switch head to the switch base:

1. Some version have two mounting screws, as shown below.
2. Other versions have two mounting pins, also as shown below.

The manufacturer has modified these limit switches so that all of them will have just the two mounting pins. The mounting screws are being discontinued.

The modified limit switches are being introduced as a running change, so it will take awhile to deplete our inventory of the older stock. Until they are all sold you may receive limit switches that still have the mounting screws.
